

Fig.3

Fig. 1 consists of two views of a circular device. The upper view is a plan view, labeled 'III - III' on the left. It shows a circular structure with a central star-like pattern. Six circular components, labeled 31, are arranged around the perimeter. Each component 31 has a central hole and is surrounded by a shaded region. The entire assembly is enclosed in a circular frame. The lower view is a cross-sectional view, showing the internal structure of the device. It features a central vertical axis with two circular components, labeled 35, positioned symmetrically. The cross-section reveals the internal geometry and the arrangement of the components within the circular frame.
